Stay Connected® All-in-One Business Continuity

Powered by Datto/Siris

An all-in-one Business Continuity and Disaster Recovery (BCDR)

Efficiently prevent data loss and minimize downtime

Maximize uptime

Raising the bar for reliability

Stay Connected® All-in-One Business Continuity

Ensures that your business is always on and resilient to disasters, Siris is an all-in-one solution that includes verified backups, restore options for any scenario, instant virtualization, and ransomware protection. SIRIS is backed by Datto's private cloud so backup, failover, and recovery can be performed locally or in the cloud with no additional configuration. Streamlined business continuity solutions save time, money, and headaches. Every component of the SIRIS stack is built by Datto to seamlessly work together, from the backup agent, to the SIRIS software platform, to a private cloud.

Maximizing Uptime

Going beyond simply recovering data, business continuity saves businesses by keeping them online in the face of otherwise devastating issues such as ransomware, malware, natural disasters, network downtime and costly human errors. Backups are stored so that any snapshot can be used to restore or virtualize. Restore options range from granular restores which can target specific files to full system restores which include instant virtualization to keep your company online. With the ability to immediately get back up and running from the cloud.

All-in-One Backup and Recovery for PCs

Stay Connected® Cloud Continuity for PCs is a comprehensive BCDR solution for desktops and laptops. It provides automated backup of your employees' PCs directly to the Cloud. So regardless of where your employees travel and work, their PC is being protected. Because it uses image-based backup technology, it provides several layers of protection to ensure your employees can get back to business quickly and easily in the event of loss, theft, failure, or ransomware attack on their PC.

File and Folder Recovery

Your employees are on the move...and so are their PCs. This results in a tremendous amount of very important business data being stored on their local hard drive which may not be backed up on a regular basis, if at all. Accidental or malicious file loss or deletion can result in tremendous inconvenience to your business operations and your employees. Stay Connected® Cloud Continuity protects against permanent data loss and provides for easy restore of files and folders directly to your employee's PC or to an alternate device.

Cloud Virtualization

In the event your employee completely loses access to their PC due to loss, theft, or hardware failure, Cloud Continuity for PCs can power up a virtual version of their PC directly in the Cloud, no matter where they are located, enabling them to quickly resume operations.

Device Recovery

And getting a new device up and running for them is a snap. Not only does Cloud Continuity for PCs restore files and folders, but also all their applications and original system configuration. Their new PC will be race-ready...no learning curve or frustrations with missing files or software. And most importantly, no lost productivity or data loss.

Recovery from Ransomware

With the threat of a ransomware attack always looming, rest assured Stay Connected® Cloud Continuity for PCs provides an easy and speedy recovery. Protected PCs can be rolled back to their last backup prior to the attack. No ransom payments. No loss of functionality.

Built-In Reliability and Simplicity

Stay Connected® Cloud Continuity for PCs is designed to provide predictable and reliable backup and recovery, with built-in ease of use. The Cloud Continuity agent sits on a protected PC and connects directly to the Cloud without the need for a local appliance. When PCs move between networks or get powered off, it can often be difficult to get reliable backups. Stay Connected® Cloud Continuity for PCs automatically pauses when a protected PC has its connection interrupted, and then automatically resumes once the device connection is restored. Screenshot Verifications validate every backup and can provide an alert if there are issues - taking out any guesswork should recovery ever be required. Stay Connected® Cloud Continuity for PCs is available for PCs running Windows 10 and provides primary volume support up to 1 TB. With Datto Cloud Continuity for PCs, you have the power to protect your business from becoming a victim of the statistics. Protect critical data and keep your employees up and running with this all-in-one BCDR solution for PCs.
